

EasiChoice™

Description

Allow customers to pay with whatever is in their wallet by offering the MEI EasiChoice™ bezel on your machines. EasiChoice card readers take banknotes, coupons, magnetic stripe cards, NFC/contactless payments and contactless EMV cards. It can also accept mobile wallet payments like ApplePay™, AndroidPay™ and SamsungPay™. Paired with a CPI validator, you can give your customers more options to complete purchases.

The evolving market for ePayments is an opportunity to increase sales. Offering more convenience to consumers lets them make the purchase using whatever form of payment they choose. This popular card reader mounts to an existing [MEI bill validator](#) or is available with a validator included—a total vending solution.

When combined with the Advance 5000™ telemeter, the MEI EasiChoice cashless bezel meets PCI requirements, giving operator's confidence that their cashless solution meets the industry standards for security.

This bezel is currently only sold in Canada and Australia for the vending market

Accessories

Advance 5000

The [Advance 5000](#), also known as A5K, is CPI's telemetry solution that will add connectivity to your vending machine and handle the communication between your card reader and the Acquirer's bank, to guarantee a fast and secure transaction. PCI DSS certified when paired with an Advance 5000 telemeter.
