

**mei**

4-in-1 Plus

Description

The MEI® 4-in-1 Plus cashless bezel enables your vending machine to accept cash, MEI coupons, contactless payments, magnetic stripe cards, and mobile wallets like ApplePay™, AndroidPay™ and SamsungPay™. A simple command system (yes, no, cancel) adds capability to interact with consumer engagement applications like loyalty programs.

More payment options—and more convenience—increases sales as consumers can now make their purchases using whatever form of payment they choose. This popular card reader can mount to the [CPI Talos note validator](#) purchased as a total solution with a validator included.

When combined with the Advance 5000™ telemeter, the MEI 4-in-1 Plus cashless bezel meets PCI DSS requirements. This gives operators confidence that their cashless solution meets the industry standards for security.

Benefits

Attract consumers, even in low light locales. Bright runway lights direct buyers toward payment options

Secures card holder data via industry-standard encryption

Fast and secure transactions with cashless. Contactless EMV certified by EMVco, Visa and MasterCard

User-friendly experience. User interface screen seamlessly guides consumer through the payment process
