

NOTE BULK NOTE LOADER

CashCode BNL - o backup

Description

The CashCode Bulk Note Loader (BNL) does more than just accept a bundle of bills at a time. It uses a note validating technology with the added benefit of increasing productivity by accepting up to 45 bills* at one time. It contains high-tech features in its validating head and is the fastest way to validate and stack bills in your bank redemption kiosk application.

Additionally, OEMs such as drop safe manufacturers have incorporated the BNL as a stand-alone device with various custom cash collection devices such as large capacity vaults and/or cash bags.
