

# NOTE VALIDATOR

mei®

## CV1000™ - old backup

### Description

The Conlux CV1000™ bill acceptor delivers more value and versatility to operators. As with all Conlux products, field configuration and programming remain simple. To enable or disable bill denominations, simply push a button on the rear of the validator and insert a configuration coupon or the denomination of choice. Conversely, these configuration changes may be done while the validator is still installed, a real timesaver at the machine. The programming module or BPM remains standard for programming updates.

Pair with the MCM5 coin changer to provide complete customer payment choice of note and coin.
