

CR100 - EOI

Description

The CR100 is a compact, integrated coin sorter and recycler that accepts coins in bulk, accurately sorts them into dedicated hoppers, and provides correct change out. Auto-jam detection and clearance functions help to minimize downtime and maximize customer satisfaction.

Easy software integration is provided through a user-friendly API using a standard USB connection. Software is provided through audit data that can detail comprehensive records of coins in and out. CR100 is commonly used in conjunction with note recyclers to make exceptional self-checkout or self-serve kiosks.
