

CV1000™

mei®

CV1000™

Description

The Conlux CV1000™ bill acceptor delivers more value and versatility to operators. As with all Conlux branded products, field configuration and programming remain simple. To enable or disable bill denominations, simply press a button on the rear of the validator and insert a configuration coupon or the denomination of choice. Conveniently, these configuration changes may be done while the validator is still installed, a real timesaver at the machine. A bill programming module or BPM remains standard for programming updates.

Pair with the MCM5 coin changer to provide complete customer payment choice of note and coin.

Benefits

Greater machine merchandising. Enhanced LED lights and bezel design increase validator visibility on vending machines

Built for active machines. Robust cashboxes with capacities of 300- or 500-notes

New brand, new image for owners. Updated chassis, cashbox, and labeling aesthetics

Marketing that increases revenue for operators. Expanded coupon options support overall revenue

Promote your business with custom vend coupons. Order with your company's unique message from:
