

# The Advance 5000 is a user friendly and feature rich device for telemetry connectivity

## User Friendly Interface

- LED lights and 3-button interface – offering better self diagnostic tools and user feedback at the machine, indicating that:
  - A machine has been filled
  - A machine has been serviced
  - A driver has performed a cash test vend
- More durable and securely locked cable connections — reinforcing machines stay online
- Easily removable and accessible components — providing easier installation and in-field updates
  - SIM Cards
  - Communication modules

## Peripheral Connectivity Choices:

- Robust wizard based service tools
- Configure via USB
- Access data through:
  - Standard DEX port or
  - USB 1.1
- Promote site retention by deploying cashless with one of the 4 MEI bezel solutions
- Interacts with vending display screens to deploy loyalty and advertising programs

## A Certified Solution:

Designed with the future in mind and as a connective pipe in your machines, a certified solution is important to future proof your investment.

- Transmits cashless transactions via a secure PCI compliant device
- Supports NAMA VDI to server standards
- Pairs with EMV certified bezels

## Advancing Features

The Advance 5000 can do more than facilitate cashless payments at the machine. Transmit real time machine data to the back office through the same device. Reconcile your cashless sales and DEX data with VMS solution, to get better control and visibility of your machines' profitability.

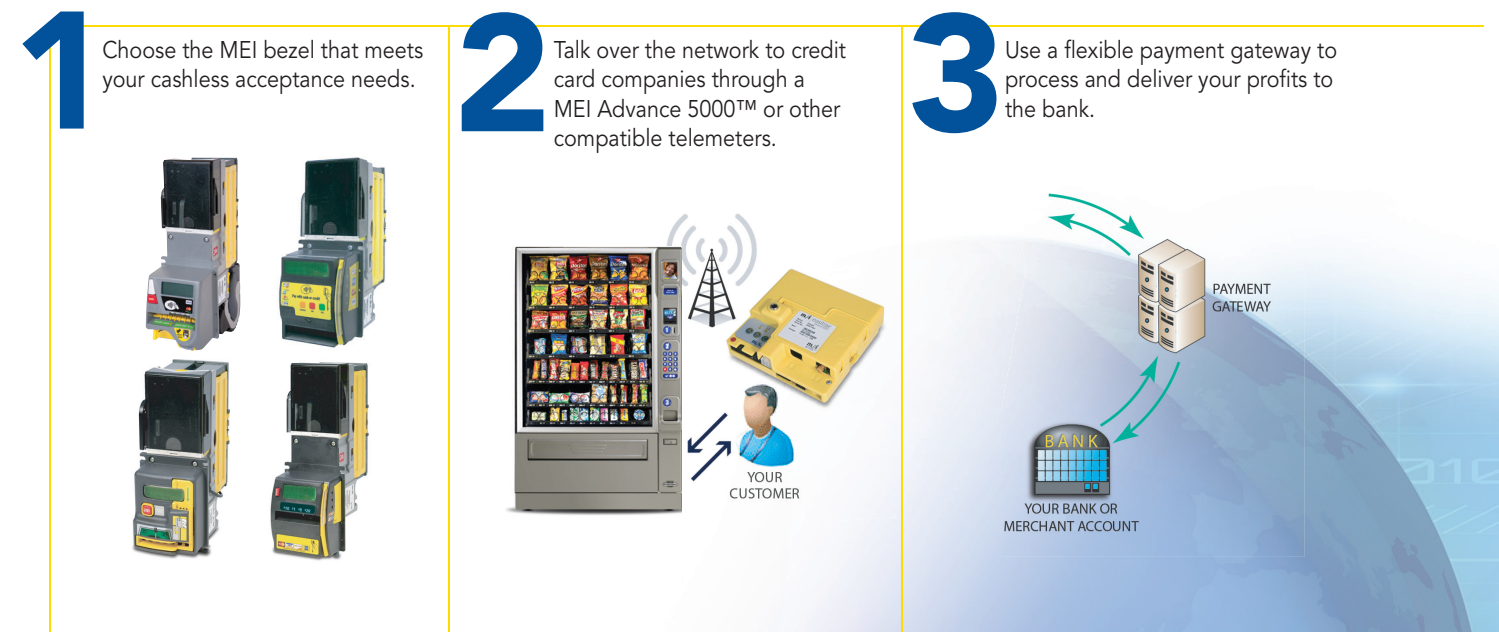

# mei Cashless Solution Suite

Equipping machines with a cashless payment option is becoming a competitive necessity for the industry. Provide the 75% of consumers carrying at least one card for payment a choice and match the machine point of sale to the traditional retail experience.

MEI has the hardware portfolio and partners to delivery an end-to-end cashless solution. Transform your machines from a cash and coupon only operation to accept cashless payment forms like:

- Traditional magnetic stripe cards
- Contactless/Near Field Communication (NFC) technology
- EMV contact "chip cards"
- Mobile wallet applications

## To craft your cashless solution:

# mei Cashless Bezel Suite

The MEI cashless bezel portfolio is comprised of different functional offerings to meet your point of sale payment needs. Choose a bezel that's right for your machine and install it right onto your existing MEI bill acceptor. Reap the revenue boost from the incremental sales generated by enabling cashless payment.

## MEI® 4-in-1 Plus

- Contactless or Near Field Communication (NFC) acceptance
- Takes traditional magnetic stripe cards, cash and MEI coupons
- Accepts mobile wallet applications, like Google® Wallet and Apple Pay®
- Strobing LED lights help indicate where to swipe cards and help merchandise machines
- 3 button interface enhances the user experience
- EMV L1 and L2 contactless certified

## MEI 3-in-1

- A 'Recycler Ready' bezel – compact in design to easily deploy cashless and recycling together in the same machine
- Enable a retail-like experience by accepting cards and higher denomination bills
- LED note denomination lights indicate which bills are accepted in real-time

## MEI Combo

- Traditional magnetic stripe reader, joined with cash and MEI coupon acceptance
- Cast metal offering deters vandals from machines in less desirable areas

## MEI EasiChoice

- Our global EMV offering, non-USA
- Contact and contactless EMV chip card acceptance
- Accepts all forms of cashless payment: magnetic stripe, contactless, chip cards, coupons and cash
- A credit only version of this device is also available in select markets
- EMV L1 and L2 certified

Behind each of these bezels lies a MEI brand note acceptor — field proven for performance and reliability.

## Cashless Connectivity

Now, Give Your Machine a Voice™ for cashless connectivity with the Advance 5000 telemeter. A highly configurable and flexible solution, it positions your business for profitability.

Talk on the network of your choice. Whether it's AT&T's 3G or Verizon's CDMA network, you can select and negotiate the communication and coverage plan that's right for you.

The Advance 5000 is also gateway and card processor agnostic. Have the ability to work with flexible gateway providers, like Apriva®, and choose the back-end providers that meet your financial and reporting tool criteria.

Its modular hardware design allows you to add and remove components like SD cards and communication modules to keep up with changing technology in the market. Connect your machines through a WAN (Wide Area Network). Verify and process cashless transactions by calling out or talking through a single telemeter.

When paired with a MEI cashless bezel is it's PCI-DSS certified, providing you the highest level of security for end to end cashless transactions.

A communication hub, the Advance 5000 can also be enabled for telemetry. It conveniently parses the cashless and telemetry DEX data across multiple IP addresses and APN (access point networks) giving operators more choices to control data, improve security and manage communication costs.
