HOW IT WORKS - THE CONNECTED PAYMENT PLATFORM FOR VENDING

DIAGNOSTICS

CPI understand that machine downtime is a big issue. And that most faults are reported as a payment device problem. **The fact is only 10% of faults are connected to the payment device.** To help operators investigate the problem remotely, **CPI have connected payment devices to the Simplifi ServiceMobile diagnostics App.** This allows operators to monitor machines, identify the type of fault and fix it right first time via remote trouble-shooting.

CASH

CPI are proud to introduce two **next generation innovation products for Note and Coin.** The **MEI Talos™ Note Validator** and the **MEI Gryphon™ Coin Validator** offer everything and more. But that's not the full story. The real innovation is that these **payment devices are connected to the Simplifi Service Mobile diagnostics App.** This allows operators to **receive real-time error notifications** such as full cash box and low coin status. The operator can use **remote trouble-shooting** to correct the problem.

CREDIT

CPI now offer a single card solution that **accepts more payment options than any other reader in the market.** This includes cash, card, mobile and cashless. Operators enjoy a **payment solution that is future ready** for any payment option. CPI are constantly working with the key global payment providers to **solve operator's business problems.** Just another reason why this connected platform is the most comprehensive solution in the market.

OFFLINE CASHLESS

With offline cashless solutions, **operators can bridge the gap between cash and connectivity** with a customized solution that offers **advanced revenue**, personalized branding, and more opportunities for customers to engage and spend. Customers load cash onto a personalized RFID media key. **With MEI Pay™, operators collect revenue in advance, even before customers have decided what to buy.**

MOBILE

Operators know that **mobile is the new wallet.** The CPI connected platform **accepts all mobile payments.** Operators can leverage the power of mobile with increased revenue from Apple Pay, Google Pay, Samsung Pay. They can **engage consumers with rewards and earn loyalty.** And take advantage of a connected solution that isn't dependent on a cellular connection (basements, parking garages, hospitals).

SECURITY

CPI meet the Payment Card Industry's PA-DSS requirements. **But this is only one layer of security.** In an age of **cyber security risks**, one layer is not enough. Operators need more security layers. **CPI provide an extra 4 x layers of security;** Server Protection, Device Protection, Perimeter Defense and Cyber Threat Monitoring. Operators and consumers can **trust CPI with all their cardholder data.**
