THE MOST COMPREHENSIVE CONNECTED PAYMENT PLATFORM FOR VENDING

EXPERIENCE CONNECTIVITY

CPI has developed a connected payment platform that accepts any payment, anytime, is connected to real-time diagnostics and will revolutionize the vending industry.

ANY PAYMENT, ANY TIME. WE'RE READY. ARE YOU?

ASK US HOW.

Cash

Elevate the potential of your payment devices with our all-new connected note and coin validation solution. With real-time diagnostics via cellular or Bluetooth connectivity, your equipment works for you by delivering performance insights and troubleshooting tips. The new MEI Talos™ Note Validator and the MEI Gryphon™ Coin Validator connect to the Simplifi Service Mobile diagnostics app to deliver real-time error notifications such as full cash box and low coin status. Now, anyone can be a technician with smart cash technology.

Card

Don't let your technology limit your revenue potential. CPI card readers offer a single solution that accepts more payment options than any other reader in the market. This includes cash, card, mobile and coupons. Operators enjoy a future-ready solution, while customers enjoy the flexibility and convenience of having options. Talk to us about the eChoice Card Reader portfolio and the 4-in-1 Plus Bezel.

Mobile

Engage customers like never before with a connected solution powered by a Bluetooth or cellular network. With mobile, you benefit from Bluetooth in basements, hospitals and parking garages, where cellular connectivity is poor. Or tap into cellular to increase revenue with Apple Pay, Google Pay or Samsung Pay. The future is mobile. Come on board with us and ask about our mobile payment solutions.

Offline Cashless

With offline cashless solutions, operators can bridge the gap between cash and connectivity with a customized solution that offers advanced revenue, personalized branding, and more opportunities for customers to engage and spend. Customers load cash onto a personalized RFID media key. With MEI Pay™, operators collect revenue in advance, even before customers have decided what to buy.

Diagnostics

Machine downtime stands between you and maximum profitability, While nearly 80% of downtime is attributed to payment devices, in reality, cash & coin validators represent only 10% of issues. To close that gap and enable operators to investigate the problem remotely, CPI have connected payment devices to the Simplifi Service Mobile diagnostics App. Now, operators can monitor machines, identify the type of fault, and fix the problem correctly the first time, every time.

Security

One line of defense is not enough to keep your data and your investments secure. At CPI, we go beyond PCI compliance to deliver multi-layered protection against threats. Our dedicated team of security experts is standing by and instantly accessible to ensure your safety and security at all times. We maintain a world-class cybersecurity program with global reach. This enables us to detect threats anywhere in the world the moment they happen. So we can respond quickly and protect your business.
