## MERCHANT PRODUCT GUIDELINES

Merchant is capable of vending a wide variety of package types.
Below guidelines are for proper vend reliability, and when testing is needed.

## SINGLE SPIRAL VENDING

## Single Spiral Vending - Height/Width

Best suited for vertical package vending

- Product should be taller than spiral dia by $0.5 "(127 \mathrm{~mm})$
- Min distance of 0.25 " ( 6.35 mm ) between the product and divider is recommended

## Single Spiral Vending - Depth

- Product depth should be more than 0.1 " (2.54mm) smaller than coil spacing
- Current spacing available from 0.44 " ( 11.2 mm ) to 4.58 " ( 116.3 mm ). See table for how this effects capacity
- Max package vending force not to exceed 7lbs (3.2kg)

## DOUBLE SPIRAL VENDING

Double Spiral Vending - Height/Width

- Best suited for horizontal package vending
- Items less than $1 / 2$ the spiral diameter should be tested
- Min distance of $0.25^{\prime \prime}$ ( 6.35 mm ) between the product and divider is recommended

## Double Spiral Vending - Depth

- Product depth should be more than 0.1 " (2.54mm) smaller than coil spacing
- Current spacing available from 0.44" ( 11.2 mm ) to 4.58 " $(116.3 \mathrm{~mm})$. See table for how this effects capacity
- Max package vending force not to exceed 7lbs (3.2kg)
- Spiral Count: \# of products per column
- Coil Spacing: Reference for product depth
- Coil Dia: Reference for min product height

| Ambient |  |  |
| :---: | :---: | :---: |
| Spiral Count | Coil Spacing | Coil Diameter |
| 5 LH | 4.58 " | 2.57 " |
| 5 RH | 4.58 " | 2.57 " |
| 6 LH | 3.78 " | $2.57{ }^{\prime \prime}$ |
| 6 RH | 3.78 " | 2.57 " |
| 8 LH | 2.90" | 2.57 " |
| 8 RH | 2.90" | 2.57 " |
| 9 LH | 2.46 " | $2.57{ }^{\prime \prime}$ |
| 9 RH | 2.46 " | 2.57 " |
| 10 LH | 2.22 " | 2.57 " |
| 10 RH | 2.22 " | 2.57 " |
| 11 LH | 1.98 " | 2.57 " |
| 11 RH | 1.98" | $2.57{ }^{\prime \prime}$ |
| 13 LH | 1.65" | 2.57 " |
| 13 RH | 1.65" | 2.57 " |
| 15 LH | 1.41" | 2.57 " |
| 15 RH | 1.41" | 2.57 " |
| 17 LH | 1.23 " | $2.57{ }^{\prime \prime}$ |
| 17 RH | 1.23 " | 2.57 " |
| 20 LH | 1.02 " | 2.57 " |
| 20 RH | 1.02" | 2.57 " |
| 25 LH | 0.75 " | 2.57 " |
| 25 RH | 0.75 " | 2.57 " |
| 30 LH | 0.60 " | 2.57 " |
| 30 RH | 0.60 " | $2.57{ }^{\prime \prime}$ |
| 38 LH | 0.44 " | 2.57 " |
| 38 RH | 0.44 " | 2.57 " |

## TRAY AND SPACING

- Maximum \# of trays 7
- Trays height adjustable in $0.5^{\prime \prime}(12.7 \mathrm{~mm})$ increments

- Location for gum and mint tray if ordered (ambient only)
- Recommended location for bottles
- Tray does tilt for loading
- Single column count for snack/candy tray is 12 columns for wide and 6 columns for narrow machines
- Dividers can be removed to accommodate wider packages (max width 5 columns)
- Column width increments by 2.75 " ( 69 mm )
- Combined columns must start with an odd number
- Reference spiral count chart for product depth capacity

- Maximum product weight per tray is 22 lbs ( 10 kg )
- Load rating on column motor is $7 \mathrm{lbs}(3.2 \mathrm{~kg})$. This is dependent on product weight and drag coefficient
- Low friction slides available to reduce drag on problematic packages
- Single columns for bottle trays is 10 columns for wide machines and 7 columns for narrow machines
- Dividers can be removed to accommodate wider packages (max width 5 columns)
- Combined columns must start with an odd number
- Column width increments by $3.25^{\prime \prime}$ ( 82.6 mm )
- Reference spiral count chart for product depth capacity

- Maximum product weight per tray is $62 \mathrm{lbs}(28.1 \mathrm{~kg})$
- Load rating on column motor is $7 \mathrm{lbs}(3.2 \mathrm{~kg})$. This is dependent on product weight and drag coefficient
- Low friction slide available to reduce drag on problematic packages
